

DAILY BRIEF

MAY 12, 2020

UPDATED Future Measure - Keeyask Returning to Regular Rotations

The Keeyask project will be returning to standard worker rotations at the end of the extended period (approximately May 19th), however there will be enhanced site-access requirements and procedures. These processes are built around the current COVID-19 situation and in response to the recommendations of Provincial health authorities.

The procedures and protocols to be put in place, such as PCR-testing and 14-day isolations, are subject to review in the upcoming weeks and months.

The following categories will have their measures **updated as follows**,

Workers residing in Manitoba

- No changes to the previous procedures, **as long as they did not leave the province, and travel within Canada, less than 14 days prior to wanting to return to work – if they did, then they will be treated as an Inter-provincial worker.**

Workers coming from outside of Manitoba

Inter-provincial

- **Immediately prior to returning to work, 14 days of isolation & self-monitoring – isolating in their home province, Manitoba, or combined for a total of 14 days (following the isolation guidelines for the Province of Manitoba).**
- Screening and COVID-19 test on day of travel to Keeyask.

International

- **Immediately prior to returning to work, 14 days of isolation in Manitoba.**
- Screening and COVID-19 test on day of travel to Keeyask.

Workers from Northern Manitoba who drive themselves, or take a shuttle, to site

- No changes to the previous procedures

At any stage, a worker will be refused the ability to return to work at Keeyask if they do not pass any of the requirements.

While these measures are being put into place to assist in reducing the risk of COVID-19, it is still essential every day to **Do Your Part**.

- | | |
|--|---|
| • Wash your hands well, often, and with soap and water | • Use a tissue, and put your used tissues in the trash, right away |
| • Wash your hands before you eat | • Avoid touching your face |
| • Cough and sneeze into the bend of your arm, not your hand | • Report any symptoms of illness to the Nurse Practitioner |

We are Keeyask. We stand for safety.

Keeyask Enhanced Rotation Process – Out of Province Traveller

Important Information:

- While on site anyone feeling ill must report to medical services immediately.
- *Decisions on next steps are in consultation with Provincial health authorities

Isolation Requirements

Inter-provincial

Immediately prior to returning to work, 14 days of isolation & self-monitoring – isolating in their home province, Manitoba, or combined for a total of 14 days (following the isolation guidelines for the Province of Manitoba).

International

Immediately prior to returning to work, 14 days of isolation in Manitoba.

Keeyask Enhanced Rotation Process – In Province Traveller

Important Information:

- While on site, anyone feeling ill must report to medical services immediately.
- *Decisions on next steps are in consultation with Provincial health authorities

Keeyask Enhanced Rotation Process – Self-Driver

As determined by Manitoba Hydro in consultation with Provincial health authorities

Important Information:

- While on site, anyone feeling ill must report to medical services immediately.

DAILY BRIEF

Self-isolation & monitoring periods

- Inter-provincial (or travelled inter-provincially within 14 days of returning to work)
 - Immediately prior to returning to work, 14 days of isolation & self-monitoring – isolating in their home province, Manitoba, or combined for a total of 14 days (following the isolation guidelines for the Province of Manitoba).
- International
 - Immediately prior to returning to work, 14 days of isolation in Manitoba.
- Those from Northern Manitoba who drive themselves to site, or take a shuttle
 - Isolate upon arrival to the Main Camp in an assigned dorm room, until their test results come back.
- “If I have to isolate, will I be paid during the isolation period?”
 - Discussions regarding this are ongoing between the Keeyask Project, employers, and the Allied Hydro Council.

What does a travel day look like if I am flying up to Keeyask?

- You will arrive at a designated hotel/conference room near the airport
- Once at the test location, you will provide identification and complete a screening questionnaire & declaration. You will then submit to a nasal swab for your test sample.
- Though the nasal swab test sample only takes a few minutes to complete, be prepared to be at the testing location for roughly 5 - 6 hours; this is how long it takes to gather, process, and receive results for everyone being tested.
- Physical distancing measures will be implemented and expected during the testing and waiting period. The area for testing and waiting will have enough space to ensure you can maintain physical distancing.
- Some type of breakfast/lunch will be provided at the testing location. However, while waiting for the test you will not be permitted to leave the premises, so it is advised you bring any preferred snacks or beverages with you when you report for testing.
- Once the test results are back, if you have a negative test result you will be cleared to travel to site and transported to the charter flight.

Some Hydro staff will be brought on to site between May 14th and the 19th in order to trial and test the procedure.

DAILY BRIEF

What if there is a positive test result?

- When an individual tests positive during the pre-travel test process they will be notified by their employer at the testing location and escorted to a private area. They will be transferred to the care of the regional health authority in Winnipeg.
- If an individual who has driven themselves to site has a positive test result, we will contact the Northern Regional Health Authority and if required transfer the individual off-site into their care
- The project will work in conjunction with public health on next steps such as contact tracing, further assessments, isolation requirements and locations, etc.

Travel requirements (post-screening/testing)

- Once testing is complete and you have been cleared to travel, transportation will be arranged by your employer to get you to your charter flight.
- Travelers must have in their possession a mandatory non-medical mask or face covering as part of the registration or check-in process otherwise they will not be allowed to continue their journey. Before you start your travel day, make sure your travel belongings include such a face-covering, or contact your employer about where and how to obtain one.

What if I don't want to go through this every four weeks?

- An individual may wish to have a rotation longer than 3 weeks in order to stay at site and avoid going home and going through the screening and testing procedure each time.
- This must be agreed upon by the worker and the worker's employer ahead of starting your rotation.
- If this is the case, the worker will then forgo a 3 & 1 schedule and go to a 6 days on – 1 day off (in camp) schedule for the duration of their stay.

No visits, tours, or commutes.

- While we are returning to as near a regular in-and-out routine as we can allow, as was implemented before the extended 8-week rotation – there will be no visitors and no tours.
- Workers that typically commute on and off site on a daily basis for work will be required to stay on site for a full rotation.
